

## Department of Chemistry

The department of Chemistry in Yashvant Rao Meghawale Govt. College Magarlod was established in the Year 2012. Graduation level classes (B.Sc.) are being conducted in Chemistry Department. The main aim of the Chemistry department is to present the science in simplest form so as to make it interesting and attractive to the students. However, to keep pace with present day demand in terms of development in teaching methods and in quality education the department is endeavoring its best to keep on upgrading infrastructural facilities and academic program.

### Vision

- The Department of Chemistry's aim is to provide students with a nationally recognised model of education that will enable them to compete and contribute to the ever- changing, technology-driven world of the 21<sup>st</sup> century.
- The Department of Chemistry is committed to achieving this vision by providing a high-quality, innovative, and intellectually challenging chemistry course of study for undergraduate (B.Sc.) students that includes curriculum, scholarship, and service/engagement opportunities that employ state-of-the- art technologies.

### Mission

- The Department of Chemistry at the Yashvant Rao Meghawale Govt. College Magarlod Dhamtari (C.G.), has as its purpose to nurture undergraduate (B.Sc.) students by providing them high-quality classroom instruction, experimental laboratory training

- The courses are developed so that students can apply their understanding of applied chemistry to produce creative, environmentally friendly technology for the benefit of society and nation

### **The objectives & Goals**

1. To establish a solid foundation for the development of scientific temperament and to educate students to address the technical challenges of the future.
2. To promote lifelong learning and professional development by providing the necessary knowledge and stimulation in an environment that fosters personal development.
3. Students that complete an applied chemistry educational programmed will be successful in their chosen field, whether it is chemical scientific practice or advanced technological study.
4. To teach our pupils about the environmental impact of all scientific and technological activities currently taking place, as well as to attract their attention to the issues facing life on Earth's sustainability.
5. Our educational program's key goals are to instill in students' discipline, responsibility, morality, and patriotism.
